Deck material: Steel/Wood

Engine type: Diesel

Saloons: 1

Toilets: 1

Engine model: Nanni 5.250 TDI

Engine power: 1x 85 hp

Cruising speed: 6 knots

Max speed: 8 knots

S / S Tiffany is 18 meters long vessel with role models from the old-time steam launches and yachts with a modified bow shape of the cut type. Reliable technical solutions from old-time steamers have been combined with modern technology in an optimal way. An enormous amount of work has gone into the woodwork of mahogany and teak and all the details to show how in the old days built passenger. The steamboat journey would not only be a pure free transport undertaken in a distinguished setting for the trip would provide a lasting value. The steam engine, originally made in Karlskrona shipyard is fully restored to mint condition. To allow operation without the steam engine is running, the ship is equipped with a diesel engine through a hydrostatic transmission operates in the same crankshaft as the steam engine. This increases significantly the availability when viewing tours where you can optionally switch between diesel engine operation and silent steam engine operation during parts of the journey. She is 18 meters long, takes 12 passengers and was built in the 2000s in honor of the steam engine. Tiffany is perfect for smaller groups, both for business meetings as for those who want to brighten up birthday, bridal shower or Gentleman dinner at the glittering stream. For more information on the ship's unique drive systems see below spec.
